UMG 103-CBM energy meter with memory

COMPACT, BEST-PRICED AND SAFETY
Large measurement data memory for even more data security

Qualified statements on energy consumption and power quality cannot be achieved with measurements that are restricted just to the point of common coupling (PCC). If one wishes to discover fault sources or energy wasters, it is necessary to acquire data at several points across the grid, i.e. the resolution of the measurement is critical. But this is often a question of space and cost.

The new UMG 103-CBM is the ideal solution for this task. The extremely compact and affordable universal measurement device requires a width of just 71.5 mm on the mounting rail and so fits conveniently into any installation distributor. Along with a large number of energy values and electrical measured values it offers a multitude of additional functions such as the measurement of harmonics, saving of minimum and maximum values, operating hours counter and bi-metallic strip function. It can be operated both as a Slave to a higher-level device, such as the UMG 604E for example, or directly connected with a PC.

A wide variety of application areas is opened due to the clock, battery and memory. It is suitable for the measurement and checking of electrical characteristics, the energy consumption and for monitoring the power quality, e.g. harmonics. Suitable applications include energy distribution systems, cost centre accounting and threshold value monitoring and it can also be used as a measured value transducer for building management systems or PLCs.
The Janitza UMG 103-CBM is based on the well-proven technology from the UMG 103. The clock, battery and measured data memory enable this device to tackle completely new applications. One the one hand, data security is significantly increased. This is crucial when energy data is to be acquired separately for individual company units or customers. On the other hand, the device can operate as a standalone solution in areas where differentiated network monitoring was previously too expensive.
Your benefits

8 advantages for you

1. Redundant – Maximum security for your measured data in the device memory

2. No separate supply voltage required

3. Simple setting of the Modbus address

4. Cost-effective and universally applicable

5. Simple installation – Rapid installation with Screw-type terminals

6. Saves space and costs during installation

7. Measurement device itself has a very low power footprint

8. Always up-to-date with firmware updates
The construction of the UMG 103-CBM is so compact that it can even find a space in heavily equipped distribution board. In doing so, it can operate as a satellite incorporated into a company-wide energy acquisition system or can act just as well as an individual measurement point. Thanks to the clock, battery and measured value memory, there is no need for a permanent communication link to a PC to save the measured data. Nonetheless, historical and current data are reliably available.

**Technical data**

**Auxiliary voltage up to 277 V**
Wide range – can be used in numerous applications

**Measured voltage up to 480 V**

**Precision class**
Effective energy class 0.5S (DIN EN62053-22:2003) for .../5 A current transformer

**Voltage and current measurement**

**Voltage and current measurement inputs**
Continuous sampling of the voltage and current measurement inputs

**Voltage measurement**
Overvoltage category 300 V CATIII

**Measurement of positive, negative and zero sequence component**
Knowledge of disruptive factors through which motors could be damaged for example

**Measurement of the reactive distortion power**
Detection of unnecessary current loading, e.g. for distribution boards, transformers up to the consumers.
UMG 103-CBM energy meter with memory

HIGHLIGHTS

AT A GLANCE

---

**Measured data recording**

**Measurement and energy data memory**
If all profiles are activated, 400,000 measured values can be saved – this represents a period of 144 days.

**Clock**
Measured data with precise timestamp

**Minimum, maximum and working values**
Saving of the minimum, maximum and working values

---

**Communication and interface**

**RS485**
– RS485 with ground connection and 3-pole plug (A, B, GND)
– Galvanic separation incl. DC/DC converter

**Simple setting of the Modbus address**
Clear and intuitive adjustment directly on the device

---

**Additional functions**

**CREST factor**
– Measurement for the power quality
– Fail-safe operation

**Comparator**
– 2 comparator groups with 3 comparators each (A-C)
– The results of comparators A to C can be combined with AND/OR operators (can be read out via Modbus)

---

**Plenty of memory!**

**Example 1**

**Data:**
Voltage L1, L2, L3
Current L1, L2, L3
Power L1, L2, L3
Reactive power L1, L2, L3
Apparent power L1, L2, L3
THD (U) L1, L2, L3
THD (I) L1, L2, L3
Effective energy L1, L2, L3
Reactive energy L1, L2, L3

(27 values) 15 min. intervals, resulting in a recording period of 144 days
(15 min * 13824 = 3456 hours (144 days))

---

**Example 2**

**Data:**
Voltage L1, L2, L3
Current L1, L2, L3
Power L1, L2, L3
Reactive power L1, L2, L3
Apparent power L1, L2, L3
THD (U) L1, L2, L3
THD (I) L1, L2, L3
Effective energy L1, L2, L3
Reactive energy L1, L2, L3

(27 values) 1 hour intervals, resulting in a recording period of 1.5 years
(1 hour * 13824 = 13824 hours (576 days))
The UMG 103-CBM: ideal for Industry 4.0 applications

Industry 4.0 - on the one hand this means networking and on the other hand intelligent control deep into the system field. The data collected by the sensors on the tip of the robot arm is transmitted to a development team on the other side of the world. This technology requires a power supply with the highest quality and reliability. Data processing in real-time cannot tolerate voltage dips. It is only logical that the energy supply is not monitored with a multitude of instruments but rather integrated in a single, modern monitoring system – just as the philosophy of Industry 4.0 advocates. Measurement technology specialist Janitza has developed the 3-in-1 Monitoring system for this.

The Janitza product range encompasses all relevant areas:

- Energy management per ISO 50001 (acquisition of V, A, Hz, kWh, kW, kVArh, kvar …)
- Power quality monitoring (harmonics, flicker, voltage dips, transients, etc.)
- Residual current monitoring (RCMi)

The UMG 103-CBM is an ideal building block for measurement data acquisition at the front line. Together with master devices (e.g. UMG 604E or UMG 96RM-E) and the GridVis® software, this allows scalable solutions to be realised. All data is logged centrally in a database and can be recorded and analysed with GridVis®. This not only saves direct costs during purchasing but also simplifies integration, training and maintenance tasks. Because all information can be called up via common, standardised interfaces, the 3-in-1 Monitoring fits perfectly into the Industry 4.0 concept.
Typical application illustration with 2 supplies

Fig.: Typical application illustration with 2 supplies, UMG 604-PRO as Master measurement device in the main supply and UMG 103-CBM for measuring the low voltage outputs.

Connection diagram

Dimension diagrams
**UMG 103-CBM**

**Item no. 52.28.001**

**Auxiliary voltage**
- Supply from single phase: 115 – 277 V AC (+- 10%), 50/60 Hz
- Supply from three phases: 80 – 277 V AC (+- 10%), 50/60 Hz

**General**
- Use in low and medium voltage networks
- Accuracy of voltage measurement: 0.2 %
- Accuracy of current measurement: 0.5 %
- Accuracy of active energy (kWh, .../5 A) measurement: Class 0.5S
- Number of measurement points per period: 108
- Uninterrupted measurement

**RMS - momentary value**
- Current, voltage, frequency
- Active, reactive and apparent power / total and per phase
- Power factor / total and per phase

**Energy measurement**
- Active, reactive and apparent energy [L1, L2, L3, ∑ L1-L3]
- Number of tariffs: 4

**Recording of the mean values**
- Voltage, current / actual and maximum
- Active, reactive and apparent power / actual and maximum
- Frequency / actual and maximum
- Requirement calculation mode (bi-metallic function) / thermal

**Other measurements**
- Operating hours measurement

**Measurement of the power quality**
- Harmonics per order / current: 1. – 40th.
- Harmonics per order / voltage: 1. – 40th.
- Distortion factor THD-U in %
- Distortion factor THD-I in %
- Current and voltage, positive, zero and negative sequence component

**Measured data recording**
- Current measurement channel: 3
- Recording period: Up to 144 days
- Memory (Flash): 4 MB
- Battery: BR1632 A
- Clock
- Online readout with GridVis®
- Mean, minimum, maximum values

**Interfaces**
- RS485: Autobaud, 9.6 – 115.22 kbps (Screw-type terminal)

**Protocols**
- Modbus RTU

**Databases** (Janitza DB, Derby DB) supported by GridVis®-Basic

**Programming / threshold values / alarm management**
- Comparator (2 Groups with 3 comparators each)

#### Measured voltage input

- Overvoltage category: 300 V CAT III
- Metering range, voltage LN, AC (without transformer): 80 - 277 Vrms (+ - 10%)
- Metering range, voltage LL, AC (without transformer): 80 - 480 Vrms (+ - 10%)
- Resolution: 0.01 V
- Frequency measuring range: 45 to 65 Hz
- Power consumption: 1.5 VA
- Measurement surge voltage: 4 kV
- Sampling rate: 5.4 kHz / phase

#### Measured current input

- Rated current: 1 / 5 A
- Resolution: 0.1 mA
- Metering range: 0.005 - 6 Amps
- Overvoltage category: 300 V CAT II
- Measurement surge voltage: 2 kV
- Power consumption: approx. 0.2 VA (Ri = 5 mOhm)
- Overload for 1 sec.: 60 A (sinusoidal)
- Sampling rate: 5.4 kHz / phase

#### Mechanical properties

- Weight: 200 g / 0.44 lb
- Device dimensions in mm (W x H x D): Approx. 71.5 x 98 x 46
- Device dimensions in inch (W x H x D): Approx. 2.81 x 3.86 x 1.81
- Protection class per EN 60529: IP20
- Assembly per IEC EN 60999-1 / DIN EN 50022: 35-mm DIN rail
- Connecting phase (U / I), Single core, multi-core, fine-stranded: 0.08 to 2.5 mm²
- Terminal pins, core end sheath: 1.5 mm²

#### Environmental conditions

- Temperature range: Operation: K55 (-25 ... +60 °C / 140 °F)
- Relative humidity: Operation: 5 to 95 % (at 25 °C / 77 °F)
- Operating altitude: 0 to 2,000 m above sea level
- Pollution degree: 2
- Mounting position: any

Log energy data, display energy consumption, reduce costs

Nowadays, energy management is not only relevant for the environment and for society but is also a critical competitive factor. Only those who can keep a close eye on their energy consumption can reduce costs and increase efficiency. To ensure optimum use of the measurement devices, Janitza offers the corresponding accessories and tailored software - a complete package that guarantees efficient energy management.

The comprehensive Janitza product portfolio ranges from the current transformer and measurement device, from the communications devices and the IT environment, right through to software solutions and databases including data analyses and evaluations. After formulating the technical solution, on request Janitza provides support throughout the entire product life cycle. For more information visit our website at www.janitza.com

- **Current transformer**: The link between heavy current and digital technology
- **Service**: Janitza provides support with selection, maintenance and support of the systems
- **Commissioning**: Commissioning of the monitoring systems
- **Training**: Training of the personnel
